Although originally aimed at the architecture, engineering, and construction (AEC) industry, the application has since become more widely used by hobbyists and other users in areas such as home design and construction, mechanical engineering, automobile design, and music technology. In its latest form, AutoCAD, has been developed as a computer-aided manufacturing (CAM) and enterprise resource planning (ERP) application, also known as CAM/ERP, in order to integrate CAD, CAM, and other technologies for the industrial sector. AutoCAD was initially sold as a stand-alone app; however, in recent years, it has been bundled with other Autodesk applications such as AutoCAD R2016 (formerly AutoCAD LT 2016). With the continuing decline of desktop and laptop computers, AutoCAD has increasingly been used as a tablet app on mobile devices such as iPad, iPhone, and Android-based smartphones, although it is still possible to run AutoCAD on desktop and laptop computers. Autodesk is working on a tablet version of AutoCAD called AutoCAD WS, which will be able to run on tablets and mobile phones. The software is available as a stand-alone app on iOS and Android. Using AutoCAD is also possible in various ways, including as a web app, through Google's Cloud AutoCAD, or as a mobile app via Apple's App Store and Android's Google Play. AutoCAD Basic The first release of AutoCAD was called AutoCAD Basic. This version was released in December 1982 and could only be run on the Intel 8088 microprocessor. The original user interface (UI) consisted of a command bar and a floating palette window. The user could not add or edit a layer. AutoCAD 2010 is a commercial computer-aided design (CAD) and drafting software program developed by Autodesk. This version is available in desktop and tablet versions. The software was first released on the Microsoft Windows platform in 2010. The earliest versions of AutoCAD were developed in the late 1970s for engineering purposes. The name AutoCAD comes from the word auto-CAD, which refers to the process of drawing a single set of orthographic drawings from a single model. Although there are multiple commercial products on the market with this name, these are in fact different software products with different functions and features.

Hypokalemic periodic paralysis caused by a novel mutation in a central-type potassium channel gene: report of a case and review of the literature. A case of the central form of hypokalemic periodic paralysis (HCKP) in a 25-year-old man is described. The patient had been diagnosed with hyperthyroidism at the age of 14 and was taking propranolol. Three years later, his weakness developed at the age of 17. The symptoms of his weakness improved markedly on potassium supplementation. A novel missense mutation (amino acid substitution, Gly84 --> Glu) in the KCNQ1 gene, a channel protein for the voltage-gated potassium channel Kv7.1, was identified by sequencing analysis of genomic DNA of the patient. The KCNQ1 mutation was also found in his father, who had no clinical symptoms, and in his mother, who had the same symptoms. Mutations in KCNQ1 have been reported in only 11 of the 26 cases of the central form of HCPP in the literature reviewed. This is the first report of a patient with central HCPP caused by a novel KCNQ1 mutation.

Q: SharePoint Online Mail Flow with MFA/2-Factor Authentication Currently, we are using SharePoint Online with MFA/2-Factor Authentication enabled and have not found a way to utilize this in Exchange Server/EWS so users can log into SharePoint using Active Directory credentials and be sent a link to their mailbox to authenticate with MFA before gaining access to SharePoint. From what I've been reading, it seems that SharePoint Online can be configured to utilize the same account and MFA tokens that Office 365 is using. We have been unable to find this option, does anyone have any experience with this, or know of a way to do this? A: In the SharePoint admin center, you can specify your Microsoft Account as the MFA authentication type, when configuring MFA for a SharePoint Online mailbox. The application ID that SharePoint uses to validate the MFA tokens is the same one you use for the authentication in Office 365. If you want to use MFA to authenticate with SharePoint Online, I suggest that you change the method of authenticating for your domain user account, and specify Azure Active Directory as the authentication type. Follow the instructions in this Microsoft document, and remove SharePoint from the list of authentication
